The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of reatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as nolypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and production of recombinant proteins, and in antibody production. Production of recombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating observations, laterals.
                                                                                                                                                                                                                          Human; novel protein; Antianaemic; osteopathic; antiinflammatory; immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallargic; decerebroprotective; antistangal; antiviral; antibacterial; antiallargic; decerebroprotectic; antistammatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  viral or

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatorropic; vulnerary; sequences have activities such as: cytostatic; heuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coapulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiding or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, cypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic ansemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antidifiammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treatment, diagnosis and prevention of cancer. The antibodies and other treatment, diagnosis and prevention of cancer. The antibodies and other those characterised by overexpression and/or activation of the amplified those characterised by overexpression and/or activation of the amplified PRO genes. Exemplary conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic, carcinomas, glioplastomas, and various head and neck tumours), eleukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, epithelial, stromal and disorders. AACSBA2 to AACSBAS represent PCR primers and hybridisation probes used in the isolation of the human probes equences. AACSBA36 to AACSBA36 represent human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PRO212, PRO290, PRO341, PRO535, PRO6199, PRO8103, PRO8103, PRO1055, PRO1005, PRO1005, PRO1005, PRO1005, PRO1005, PRO1003, PRO1003

Its cDNA was isolated from an adult lung cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopoiesis requiators (treating myeloid or lymphoid cell deficiencies), in the promotion of tissue growth, they may

                                                                                                                                                                                                                                                                                                                                                                                   The invention provides membrane-bound PRO polypeptides and polynuclectides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors. TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially

proteins. The PRO proteins have cytostatic activity. The PRO proteins proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as can be used for targeted delivery of bioactive molecules, such as sequences, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. ARA44270 to ARF44470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAR44087 to AAR44269 and AAB65184 to AAB65180 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Godowski PJ;

The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or angiogenic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, Reynaud's disease, rheumatoid arthritis, angina, myocardial

Claim 69; Fig 58; 293pp; English.

The invention relates to novel human angiogenesis-associated proteins designated PRO proteins (AAB53064-B53097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells comprising a PRO uncleic acid, the recombinant production of a PRO protein, PRO antibodies specific for a PRO protein, fusion proteins comprising a PRO protein, and approach, agonists or antagonists of a PRO protein, and compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO expression or activity; diagnosing a cardiovascular, endothelial or angiogenic disorder, or a susceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a particular tissue; treating a cardiovascular, endothelial or angiogenic disorder via the administration of a PRO protein, PRO nucleic acid; on PRO nucleic acid; and methods of inhibiting or stimulating endothelial classification of a PRO protein, or an agonist or stimulating endothelial cell growth, cardiac hypertrophy or PRO-induced angiogenesis via the administration of a PRO protein, or an agonist or antagonist thereof. PRO nucleic acids, PRO protein, or an agonist or antagonist thereof. PRO nucleic acids, PRO proteins, antibodies against PRO proteins, dabetic retinopathy, rheumatoid arthritis. Crohn's disease, psoriasis, endometriosis, ulcers, wounds, cancer, Alzheimer's disease, psoriasis, endometriosis, ulcers, wounds, cancer, Alzheimer's disease, psoriasis, condometriosis, ulcers, wounds, cancer, Alzheimer's disease, psoriasis, endometriosis, ulcers, wounds, cancer, Alzheimer's disease, psoriasis, condometriosis, ulcers, wounds, cancer, Alzheimer's disease, or stroke. Secondarial infarction, hypertension, condometriosis, ulcers, wounds, cancer, and pense encoding PRO proteins, to analyse genetic disorders, and in gene therappy. PRO nucleic acids are additionally of potential animals useful for the development and screening of potential

COMPLEX COMPLEX II OR CYTOCHROME C REDUCTASE
COMPLEX COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERALES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS (BESC AND B566) WHICH ARE NOT COVALENTLY).

C -1 COFACTOR: TWO HEME GROUDS (B562 AND B566) WHICH ARE NOT COVALENTLY).

C -1 COFACTOR: TWO HEME GROUDS (B562 AND B566) WHICH ARE NOT COVALENTLY).

C -1 COMMIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
C CYTOCHROME C1 AND THE RIESER PROPERIN (BY SIMILARITY).

Natl. Acad. Sci. U.S.A. 89:5877-5881(1992).
-1- FUNCTION: BRINGS ABOUT PHOSPHORYLATION OF SPECIFIC THREONINES IN
-THE HEAVY CHAINS OF MYOSIN THICK CHEWOTAXIS, WHICH RESULTS IN
INHIBITION OF MYOSIN THICK FILAMENT FORMATION. PHOSPHORYLATION
ALSO INHIBITS THE ACTIN-ACTIVATED ATPASE ACTIVITY OF MYOSIN.
                                            Unpublished observations (AUG-1994).

--- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

--- SIMILARITY: BELONGS TO THE UPF0053 FAMILY. STRONG, TO

H.INELUENIZAE HIOLO7.

--- SIMILARITY: CONTAINS 2 CBS DOMAINS.

--- CAUTION: REF. 1 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A
FRAMESHIFT IN POSITION 199 THAT PRODUCES TWO ORFS.

--- CAUTION: REF. 3 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO NUMEROUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Submitted (DEC-1989) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PRODUCED BY T-CELLS IN RESPONSE TO ANTIGENIC OR
MITOGENIC STIMULATION, THIS PROTEIN IS REQUIRED FOR T-CELL
PROLIFERATION AND OTHER ACTIVITIES CRUCIAL TO REGULATION OF THE
IMMUNE RESPONSE. CAN STIMULATE B CELLS, MONOCYTES, LYMPHOKINE-
ACTIVATED KILLER CELLS, NATURAL KILLER CELLS, AND GLIOMA CELLS.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE IL-2 FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                    BEYET J.C., Cheevers W.P.;
Submitted (DEC-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: PRODUCED BY T-CELLS IN RESPONSE TO ANTIGENIC OR
MITOGENIC STIMULATION, THIS PROTEIN IS REQUIRED FOR T-CELL
PROLIEERATION AND OTHER ACTIVITIES CRUCIAL TO REGULATION OF THE
IMMUNE RESPONSE. CAN STIMULATE B CELLS, MONOCYTES, LYMPHOKINE-
ACTIVATED KILLER CELLS, NATURAL KILLER CELLS, AND GLIOMA CELLS.

-!- SUBCELLULAR LOCATION: Secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        INTERLEUKIN-2.

-I- FUNCTION: PRODUCED BY T-CELLS IN RESPONSE TO ANTIGENIC OR MITGENIC STIMULATION, THIS PROTEIN IS REQUIRED FOR T-CELL PROLIEFRATION AND OTHER ACTIVITIES CRUCIAL TO REGULATION OF THE IMMUNE RESPONSE. CAN STIMULATE B CELLS, MONOCYTES, LYMPHOKINE-ACTIVATED KILLER CELLS, NATURAL KILLER CELLS, AND GLIOMA CELLS.
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: BELONGS TO THE IL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Molecular cloning and expression of DNA encoding ovine interleukin

           Aruffo A., Seed B.;

Expression of cDNA clones encoding the thymocyte antigens CDla, b, c demonstrates a hierarchy of exclusion in fibroblasts.";

I mmunol. 143:1723-1730(1989).

I EUNCTION: NOT KNOWN.

I SUBUNIT: ASSOCIATES NON-COVALENTLY WITH BETA-2-MICROGLOBULIN.

I SUBCELLULAR LOCATION: Type I membrane protein.

I TISSUE SPECIFICITY: EXPRESSED ON CORTICAL THYMOCYTES, ON CERTAIN T-CELL LEUKENTAS, AND IN VARIOUS OTHER TISSUES.

I SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.

I DATABASE: NAME=PROW; NOTE=CD guide CDl entry;
